Introduction

Background and Motivation

- Transformer models applied to time series tasks were being beat by linear models [2] They are different from traditional NLP tasks
- Our goal is to show that with patching and channel independence, we can show that transformer models outperform linear models on time series tasks

1. Patching

2. Channel Independence

Methods

Architecture

Hierarchical Patching Independent Exploration (HPatchTST)

Model Evaluation

Results

	Model	Dataset					
		Weather		Electricity		Traffic	
	Pred Len = 96	MSE	MAE	MSE	MAE	MSE	MAE
Ours	dLinear	0.1740	0.2349	0.1416	0.2398	0.4129	0.2888
	PatchTST/42 (L=336)	0.1513	0.1997	0.1317	0.2258	0.3830	0.2618
	PatchTST/64 (L=512)	0.1468	0.1963	0.1302	0.2249	0.3767	0.2602
	HPatchTST/42 (L=336)	0.1495	0.1970	0.1319	0.2254	0.3822	0.2643
	HPatchTST/64 (L=512)	0.1478	0.1988	0.1301	0.2238	0.3767	0.2627
Paper	PatchTST/42 (L=336)	0.1520	0.1990	0.1300	0.2220	0.3670	0.2510
	PatchTST/64 (L=512)	0.1490	0.1980	0.1290	0.2220	0.3670	0.2490

Conclusion

Takeaways:

- PatchTST (and HPatchTST) perform better than linear models
- Reduction in time and space complexity ($N = L/S$)
- Hierarchical model gains are insignificant from base PatchTST
 - Marginal gains in specific datasets, warrants further study

So will we see the sun?

No, we won't :(

Future work:

- Modelling cross channel dependencies
- Adaptive patching
